■ 使用注意事项 Precautions for Use

- 在容易发生雷击导致的浪涌的环境下，电阻器直接用于断路的环境下，电阻器直接连接输入、输出和地线的情况下，或者在施加脉冲的电路中使用的电阻器，浪涌和脉冲有可能损坏电阻器。针对可能的浪涌和脉冲，有必要假定最坏的情况，在进行十分仔细检验的基础上，选定电阻器。
- 请设计接收端子和安装方法以便在安装时电阻器不会受到过大的压力。尤其是当电阻器一边被固定时，即使较小的力也可能使电阻器折损。在组装有一边已经固定好的电阻器时，请不要再接入外部压力。
- Under the environment where surge like thunders etc. is apt to happen, the resistors used for open circuit, resistors connected directly to input, output or ground, and resistors used for the circuit pulse applied to, may be destructed by surge or pulse. Therefore, the resistors need to be selected after sufficient check on the supposition of the worst condition against possible surge and pulse.
- Please design the receiving terminal and the mounting method so that big power is not applied to the resistor when you assemble the resistor. Especially, comparatively weak power might be broken in the condition that the one side of the resistor is fixed. Please do not add the outside power when you assemble the resistor with the one side of the resistor fixed.
