SG73-RT Surge Current Flat Chip Resistors (Anti Sulfuration)

Coating color:Wine red

Features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material.
- Superior to RK73 series chip resistors in surge withstanding voltage and pulse withstanding voltage.
- Suitable for both reflow and flow solderings.
- Products with lead free termination meet EU-RoHS requirements. EU-RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Tested.

Applications

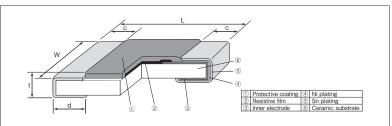

• Car electronics, Power supply, Industrial robot

Reference Standards

IEC 60115-8 JIS C 5201-8 EIAJ RC-2134C

Operating Temperature Range : −55°C ~+155°C

Rated voltage= $\sqrt{Power Rating \times Resistance value}$ or Max. working voltage, whichever is lower.

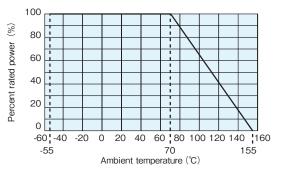

*1 Standard packaging : TD(4mm pitch punch paper)

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature". For more details, please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog.

Flat Chip Resistor

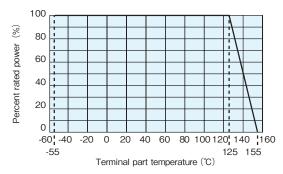

Derating Curve

For resistors operated at an ambient temperature of $70^\circ\!C$ or higher, the power shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve. %Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

Performance

Test Items	Performance Requirements	$\Delta R \pm (\% + 0.1 \Omega)$	Test Methods			
Test items	Limit	t Typical Test Methods				
Resistance	Within specified tolerance	-	25°C			
T.C.R.	Within specified T.C.R.	-	+25°C/-55°C and +25°C/+125°C			
Overload (Short time)	2	0.5	Rated voltage × 2.5 for 5s			
Resistance to soldering heat	1	0.75	260°C±5°C, 10s±1s			
Rapid change of temperature	0.5	0.3	-55°C (30min.) /+125°C (30min.) 100 cycles

Endurance at 70°C or rated terminal part temperature 3 0.75		0.75	$70^{\circ}C \pm 2^{\circ}C$ or rated terminal part temperature $\pm 2^{\circ}C$ 1000h 1.5h ON/0.5h OFF cycle			
High temperature exposure	igh temperature exposure 1 0.3		+155℃, 1000h			
Sulfuration test	5	0.2	Soaked in industrial oil with sulfur substance 3.5% contained 105°C±3°C 500h			

Please refer to conventional products for characteristic data such as temperature rise.

Precautions for Use

• The substrate of chip resistors is alumina. Cracks may occur at the connection of solder (solder fillet portion) due to the difference of the coefficient of thermal expansion from a mounting board when heat stress like heat cycle, etc. are repeatedly given to them. Care should be taken to the occurrence of the cracks when the change in ambient temperature or ON/OFF of load is repeated, especially when large types of W2H/W3A which have large thermal expansion and also self heating. By general temperature cycle test using glass-epoxy (FR-4) boards under the maximum/minimum temperatures of operating temperature range, the crack does not occur easily in the types of 1J~2E, but the crack tends to occur in the types of W2H/W3A. The occurrence of the crack by heat stress may be influenced by the size of a pad, solder volume, heat radiation of mounting board etc., so please pay careful attention to designing when a big change in ambient temperature and conditions for use like ON/OFF of load can be assumed.
